

## Learning from Home

Use the ideas below, alongside this week's resource, to support your home learning.

The "Eat Out to Help Out" scheme offers vouchers to be used when dining out offering up to 50% off. What is 50% as a fraction and decimal fraction? What is 50% of £20, £12, £15? If your family had a meal costing £32.78, how much would they pay after using their 50% dining voucher? Have you ever been to a shop that offered a sale such as 10%, 20% or 25% off? What is 10%, 20% and 25% as a fraction? Use the resource found in the learning from home section to explore percentages further.

Design a poster or flyer to promote a local business or charity.

Make a list of all the shops in your local area. What product or service do they sell? Compare this with a contrasting area you have visited before e.g. a village, town or city (depending on where you live).

Think about your favourite shop or restaurant. Why is it your favourite? Write a letter to tell them their shop is your favourite. If they have reopened, you could thank them and if they have not, you could explain you are looking forward to when they do. Make sure you send your letter!

Create a picture of something you would like to buy at your favourite shop e.g. a toy or clothes, or something you would do at your favourite shop or restaurant e.g. have a meal or a haircut.

Interview a family member or someone you know. Find out what types of shops and restaurants they visited when they were younger.
